EDUCATION

University of Waterloo

Bachelor of Computer Science

Relevant coursework: *Neural Networks, Numerical Computation and Data Structures & Data Management*

Waterloo, ON

September 2023 – April 2028

EXPERIENCE

Software Developer I

Sep 2025 – Dec 2025

Intact Financial Corporation

Montreal, Canada

- Delivered backend features across multiple Spring Boot microservices in an Agile team using Java, Oracle SQL, Kubernetes, and Kafka.
- Implemented a cross-environment, multilingual logo-selection system across Angular and Thymeleaf services, with full unit test coverage and successful production rollout.
- Resolved critical issues in SOAP and REST APIs, improving system reliability and supporting integrations with cross-team services.
- Increased test coverage up to 90% across 3 Spring Boot services using JUnit and Spring Boot Test, reducing the risk of regression in critical flows.
- Led the squad's observability initiative by adding service-level metrics and building Dynatrace dashboards for 7 services, reducing investigation and root-cause analysis time.

Student AI Researcher - Applied Strategy

Jan 2025 – Apr 2025

Waterloo Experience Accelerate — Local Technologies Inc.

Remote

- Conducted applied AI research on collaborative digital platforms, evaluating recommendation systems, predictive analytics, and AI-assisted user engagement.
- Analyzed competitor AI implementations and real-world case studies to identify scalable, low-complexity solutions suitable for small and local businesses.
- Produced and presented AI strategy reports to stakeholders, translating technical capabilities and constraints into actionable product and roadmap recommendations.

PROJECTS

Farmesh | *Next.js, TypeScript, Supabase, PostgreSQL, Backboard*

Mar 2026

- Built a full-stack platform connecting farmers and restaurants through an AI-assisted coordination system for local food supply chains.
- Designed a multi-agent pipeline (intake, normalization, demand interpretation, matching) to transform free-text listings into structured marketplace data.
- Developed role-based dashboards (farmer, buyer, admin) with real-time match updates and transparent AI reasoning for each recommendation.

Biquadris | *C++, Object-Oriented Design*

Nov 2024 – Dec 2024

- Designed and implemented multiplayer Tetris clone with real-time board updates, turn-based gameplay, and level difficulty escalation.
- Applied decorator, observer, and command design patterns to support dynamic gameplay elements and improve code modularity and testing.

Befriend – Your Social Circle | *Flutter, Firebase*

June 2023 – Aug 2024

- Built and published a cross-platform social app (100+ downloads), managing all aspects from design to deployment on the App Store and Play Store.
- Designed Firebase backend with indexed collections and rule-based access, reducing reads and ensuring real-time sync across platforms.
- Built a responsive UI with MVVM architecture and Flutter's Provider package for efficient state management.

TECHNICAL SKILLS

Languages: Java, Python, C++, TypeScript, JavaScript, Swift, HTML, CSS, Dart

Frameworks & Libraries: Spring Boot, React, Next.js, PyTorch, NumPy, Flutter, Firebase

Tools: Git, Microsoft Azure (AZ-900, AI-900), Jenkins, Kafka, Kubernetes, Jira, Postman, Matplotlib

Databases: PostgreSQL, Oracle SQL, MongoDB, Firebase Firestore
